Quality and Consistency through Standard Deviation

![Graph showing quality and consistency through standard deviation. The graph compares frosted and clear bulbs with power on the x-axis and standard deviation on the y-axis. Frosted bulbs show a peak at 40 power with a value of 0.6, while clear bulbs show a peak at 100 power with a value of 0.2. The graph also indicates that as power increases, the standard deviation decreases for both types of bulbs.]
